                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation and not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   IMPORTANT: This sequence is not the entire insert of clone RR3-407F17 It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions. The true left end of clone RP3-407F17 is at 1 in this sequence. The true left end of clone RP3-104E15 is at 69561 in this sequence. The true right end of clone RP3-333H23 is at 17123 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP3-407F17 is from the library RPCI-3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong.                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                         as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                           This sequence encodes the human TAB1 protein.

The invention relates to a method for screening a substance inhibiting the formation of a complex between XIAP and TAB1, in which X-linked inhibitor of apoptosis protein (XIAP), transforming growth factor-beta activated kinase 1(TAK1) binding protein 1(TAB1) and a substance to be tested are contacted with each other and then the presence or formation of a complex between XIAP and TAB1 is detected. The substance or be used as a drug for extracellular matrix protein production enhancement, cell growth inhibition, monocyte migration, physiologically active substance and beta-amyloid protein deposition. A substance inhibiting the formation of a complex between TAB1 and XIAP as well as between XIAP and TGF-beta (Transforming growth factor-beta) type I and/or type II receptor is useful as a drug.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1369 TCTGACGGAGGCCTCTTCCGCTCCCGGCCCGCCCACTCGCTCCCGCCTGGCGAGGACGGT 1428

This cDNA clone codes for human TAB1 (see AAW26706), a novel member of the transforming growth factor-beta receptor signal transduction pathway, which activates TAK-1 knames activity upon binding. To obtain the full-length TAB1 coding sequence, a human kidney cDNA library was screened using as a probe a partial TAB1 cDNA obtained from a yeast two-hybrid assay for proteins that interacted with TAK1. The 5' terminus was identified by 5'RACE. 2 Different clones were sequenced, with cytosine and adenine (see AAT91178) as the IBSTh nucleotide, respectively, and deposited as FERN BP-5599 and FERN BP-5509, respectively. Also claimed are: isolated DNA encoding a protein modified by a substitution, deletion and/or addition of 1 or more amino acids of the 504-residue TAB1 sequence; (3) isolated DNA encoding a protein comprising am above protein comprising a midove protein comprising a protein comprising a protein comprising a protein comprising a protein or polypeptide; (5) expression vector comprising an above DNA, and (6) host cell, preferably a mammalian or yeast cell, transformed by the expression vector. Cells expression TAB1 and TAK1 can be used to sereen for TGF-beta signalling pathway inhabitors by contacting the cells with a test compound, and measuring the TAK1 kinase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          40
                                                                                                                                     /note= "another clone has adenine at position 185, with codon AGC (Ser) altered to AGA (Arg)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SerAspGlyGlyCeuPheArgSerArgProAlaHisSerLeuProProGlyGluAspGly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA encoding TAK1 binding protein TAB1 - member of transforming growth factor beta receptor signal production pathway, which activates TAK-1 kinase activity upon binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1560 BP; 332 A; 469 C; 480 G; 279 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
This cDNA clone codes for human TAB1 (see AAW26707), a novel member of the transforming growth factor-beta receptor signal transduction pathway, which activates TAK-1 kinase activity upon binding. To obtain the full-length TAB1 coding sequence, a human kidney cDNA library was screened using as a probe a partial TAB1 cDNA obtained from a yeast two-hybrid assay for proteins that interacted with clones were sequenced, with cytosine (see AAT91175) and adenine as the 185th nucleotide, respectively, and deposited as PERM BP-5599 and FERM BP-508, respectively. Also claimed are: isolated DNA encoding a protein modified by a substitution, deletion and/or addition of 1 or more amino acids of the 504-residue TAB1 sequence; (2) DNA which can hybridise with the 1560 bp nucleic acid sequence; (2) DNA encoding a protein comprising aniabove protein or polypeptide; (5) expression protein comprising an above DNA; and (6) host cell, preferably a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-NOV-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mammalian or yeast cell, transformed by the expression vector. Cells expressing TAB1 and TAKK can be used too screen for TGF-beta signalling pathway inhibitors by contacting the cells with a test compound, and measuring the TAKK kinase activity.

comprises: (a) contacting the polypeptide in the presence of a sample;
and (b) detecting the amount of bound polypeptide, in which the sample;
and (b) detecting the amount of bound polypeptide, in which the sample
can be pre-mixed with TAMI or TAB1 polypeptide first. The transforming
convert factor (TGF) beta inhibitory substances can be used in drugs for
indications e.g. as TGF-beta signal transmission inhibitors or
activators, or anoncyre migration production prevention inhibitors or
activators, or monocyre migration inhibitors or activators, or
immunosuppression inhibitors or activators, or amyloid beta protein
cycliptation inhibitors or activators, and such substances can also be
inhibitors of the TAMI polypeptide function, particularly kinase
activity. The present sequence encodes human TABI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1458 CGTGTTGAGCCCTATGTGGACTTTGCTGAGTTTTTACCGCCTCTGGAGCGTGGACCATGGC 1517

The present invention describes a method for screening compounds for inhibition of inflammarcry cytokine signal transduction by contacting the sample with TAKI and its receptor TABI and selecting for inhibition of TAKI/TABI binding. Also described is a method for screening compounds for inhibition of inflammarcry cytokine signal transduction in which the inhibition of TAKI phosphorylation is selected for; and drug compositions for the treatment of inflammatory disorders containing as active component an inflammatory cytokine signal transduction inhibitor. TAKI is an essential component of the signalling process which results in release of inflammatory cytokines such as interleukin-1 (IL-1), the methods can be used for the selection of effective antiinflammatory agents. The present for the selection of effective antiinflammatory agents. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A method has been developed for screening for substances which inhibit the binding of TAKI polypeptide to TAKI polypeptide. The method comprises: (a) contacting the polypeptide in the presence of a sample; and (b) detecting the amount of bound polypeptide, in which the sample can be pre-mixed with TAKI or TABI polypeptide first. The transforming crowth factor (TGF) beta inhibitory substances can be used in drugs for indications e.g. as TGF-beta signal transmission inhibitors or citivators, or extracellular matrix protein production enhancement inhibitors or activators, or call proliferation prevention inhibitors or activators, or activators, or inhibitors or activators, or activators, or inhibitors or activators, or anyloid beta protein precipitation inhibitors or activators, or amyloid beta protein composition inhibitors or activators, and such substances can also be inhibitors of the TAKI polypeptide function, particularly kinase or activity. The present sequence encodes human TABI.

The method comprises: (a) contacting the polypeptide in the presence of a sample; cand (b) detecting the amount of bound polypeptide, in which the sample; cc and (b) detecting the amount of bound polypeptide, in which the sample; cc and be pre-mixed with TAKI or TABI polypeptide first. The transforming crowth factor (7GF)-beta inhibitory substances can be used in drugs for indications e.g. as TGF-beta signal transmission inhibitors or clivators, or extracellular matrix protein production enhancement conhibitors or activators, or cell proliferation prevention inhibitors or activators, or monocyte migration inhibitors or activators, or activators, or immunosuppression inhibitors or activators, or activators, or immunosuppression inhibitors or activators, or activators, or immunosuppression inhibitors or activators, or anyloid beta protein cc precipitation inhibitors or activators, or anyloid seta protein cc inhibitors of the TAKI polypeptide function, particularly kinase cc activity, The present sequence encodes TABI-FLAG from an example of the present sequence encodes TABI-FLAG from an example of

                                                                                                                                                                                                                                                                                                                                                                        disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB1678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamonlytic anamia, autoimmune thyroiditis, diabetes mellitus, Crohn's
                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rosen

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB030967-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic a cide, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and corter cancers of the adenal gland, bone, bone marrow, breast, carcioratestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; and withple sclerosis, rheumatoid arthritis and ulcerative colitis; col cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and paramitic infections.

Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated polypeptide for treating, preventing and or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       15191
                                                                                                or research purposes. The prostate cancer antigens may be used to trea disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the preser
                                                                                                                                                                     AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; prostate cancer; prostate cancer antigen; detection; diagnosis; neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; antibacterial; gene therapy; neural; immune; reproductive; renal; gastrointestinal; pulmonary; cardiovascular; proliferative disorder; wound; infectious disease; ss.
